APPENDIX A-103

SAFETY LEVEL CODES (SLCs)

1. Number of characters: One.

2. Type of code: Alpha.

3. Explanation: A code to indicate the type of safety level used (FIXED* or VARIABLE).

4. Source: Supply Control Data Change, DIC ZR3, initiated by the Item Manager.

5. The following codes are assigned:

CODE   DEFINITION

F   Fixed Safety Level.

V   Variable Safety Level (not to exceed the time interval
                represented by the Procurement Leadtime).

W   Mechanically computed within the Safety Level (SL)
                process (user cannot update manually). Generated
                when Weapon System SL quantity is greater than normal
                DoD Variable SL quantity.
